<th>Import tariff - nets</th>
<th>VAT - nets</th>
</tr>
</thead>
</table>

Notes

For an explanation of indicators, ranks, and other information, see the Country Profile Overview.

Sources listed reflect most recent value.

Case notification rate is based on number of reported outpatient cases.

Nationally representative surveys (MICS and DHS) are used for reporting intervention coverage estimates for 1) mosquito net and ITN possession and use and 2) antimalarial treatment.

Population at risk is determined from modelling retrospective climate data and population projections. Percentage of population at risk does not vary by year.
