GEOGRAPHY OF MALARIA

(A medical-geographical study of an ancient disease)

A.Y. Lysenko, I.N. Semashko

“A clearly described nosogeography is only half of the issue. The other half is the causal nosogeography and the understanding of the causes of the natural habitats of the agents of the disease”.

V.N. Beklemishev, 1959.

1. Introduction
2. Dynamics of the spread of malaria during its original development
 - 2.1. The initial nosoarea
 - 2.2. The formation of the nosoarea
 - 2.2.1. Stages of the formation of the nosoarea
 - 2.2.2. The formation of the distribution areas of the individual types of malaria agent.
 - 2.2.2.1. Distribution area of *P. vivax*
 - 2.2.2.2. Distribution area of *P. falciparum*
 - 2.2.2.3. Particularities of the distribution area of *P. ovale*
 - 2.3 External borders of the nosoarea
 - 2.3.1 Distribution area of Anopheles
 - 2.3.1.1. Distribution area of Anopheles mosquitoes and conditioning factors
 - 2.3.1.2 Distribution area of strains of Anopheles known to be vectors
 - 2.3.2. Temperature limits on parasite development
 - 2.3.3. Economic activity of the population and migration
 - 2.3.4. The furthest boundaries of the nosoarea
3. Structure of the malaria distribution area during its peak period
 - 3.1. Definition of nosoarea structure
 - 3.2. Principles of the subdivision of malariogenic territories
 - 3.2.1. Malariological zoning using climatic indicators
 - 3.2.2. Malariological zoning using the principle of zoogeography
 - 3.2.3. Malariological zoning and typological mapping using the principle of landscape
 - 3.2.4. Developing typological malarial maps according to epidemic levels
 - 3.3. Compiling a map of the “structure of the worldwide malaria distribution area based on primary endemic levels”
 - 3.3.1. Basic requirements of the map of the “structure of the worldwide malaria distribution area according to initial endemic levels”
 - 3.3.2. Analysis of the map of the “structure of the worldwide malaria distribution area according to initial endemic levels”
4. Dynamics of the distribution area following the beginning of mass anti-malaria activities
 - 4.1. Spontaneous regression period
 - 4.2. Dynamics of the nosoarea during the organised fight against and eradication of malaria
5. Structure of the contemporary malaria distribution area
 - 5.1. Methods of evaluating risk of malaria infection
 - 5.2. Compiling the map of the structure of the contemporary malaria distribution area according to risk of infection
 - 5.2.1. Evaluation of the status of malaria eradication programmes across the world
 - 5.2.2. European countries

5.2.3. Asian countries

5.2.4. African countries

5.2.5. American countries

5.2.6. Characteristics and analysis of the map of the structure of the contemporary malaria distribution area according to risk of infection

6. Conclusion

Summary
