

RBM Toolbox

I- RBM Country Needs Assessments Tools:

These guidelines have been written to assist national malaria control programs and partners who will be supported by external and internal consultants, to carry out their individual needs assessment while also providing a general framework for cross-country comparisons/issues.

The needs assessment process will cover four key areas of:

- General information
- Core interventions
- Cross-cutting issues
- Program management and health systems

The process and documentation of the needs assessment will be driven by three main tools:

The Guidelines for RBM Needs Assessment: [English](#) (334 K), [French](#)
The RBM Needs Assessment Report Template: [English](#) (796 K), [French](#), and
The Needs Assessment Calculation Tool: [English](#) (361 K), [French](#)

For more information please contact RBM, inforbm@who.int

Other Useful Tools:

PMI: The President's Malaria Initiative has an assessment tool available. This assessment is aimed at the management and organization capacity of the NMCPs. While the specific areas of management and organization that relate to NMCPs are discussed in Chapter 2, it is important to clarify what this assessment **is not intended to cover:**

- Technical capacity of NMCP staff
- Laboratory capacity of NMCP to support malaria control activities
- Technical quality of the national malaria control strategy
- Management and organizational capacity at the district level
- Effectiveness of the national malaria control board (interministerial body that exists in some countries)
- Broader health systems issues that affect malaria control programs such as compensation for NMCP staff or the Ministry of Health (MOH) financial management or procurement systems.

In short, this assessment tool is aimed at the management and organizational competencies of NMCPs that enable them to carry out their core functions
