Integrated Vector Management

Dr Raman Velayudhan,
Coordinator,
World Health Organization,
Geneva
Integrated Vector Management

A rational decision-making process for the optimal use of resources for vector control

Its goal to make a significant contribution to the prevention and control of vector-borne diseases.
Five Key Elements:

- Advocacy, social mobilization and legislation
- Cross-sector collaboration
- Integrated approach
- Evidence-based decision-making
- Capacity-building
WHO Consultation on development of a Global Action Plan for IVM

- Global Strategic Plan
- Global Action Plan

**Area 1**  Capacity-building and training

**Area 2**  Advocacy and Collaboration

**Area 3**  Evidence-based decision making and integrated approach

December 2008
IVM Package (2012)
## Percentage of countries with national IVM policy

<table>

Challenges

1. Reorientation of the program
2. Capacity building and career pathway
3. Decision making process and Inter Sectoral Actions
4. IVM in Emergency management
5. Mitigating the impact of Climate change
We need to improve our definition

Thank you
